MongoDB Atlas on Azure

The fully-managed developer data platform with the flexibility you need to build modern and scalable applications on Azure

Cloud databases offer more for modern app developers:

- Flexibility to enable rapid app development
- A fully managed experience that can handle high data volumes and deploy anywhere in the world
- Confidence that their app will be highly available and performant at scale
- Real-time insights integrating all the data services needed to build modern applications

Build modern, cloud-native applications with MongoDB Atlas on Azure

Or migrate existing apps to a fully managed developer data platform for enhanced agility and scalability

Build on a unified developer data platform

Intuitive developer experience

One platform, many workloads

Operational ease of use

Reduce complexity and sprawl

Handle common tasks intuitively

Easily manage and visualize data

Broad Spectrum of Use Cases

Limitless innovation with Azure

Innovate with Microsoft Azure

Deep integration with Microsoft services

Robust security features

Mural empowers digital collaboration at scale with MongoDB Atlas on Azure

"In the past two years of massive growth we've been able to keep up with the demand without having to add headcount. This really has helped our small teams focus on refining and discovery – ultimately leading to better experiences for our customers."

Enrico Lapel,
Data & Analytics manager
