Microsoft #BuildFor2030 Initiative

Empowering Communities

Building more resilient communities, together

Reimagining a world that works better for more of us.

As a partner to the United Nations, Microsoft has pledged to support the Sustainable Development Goals (SDGs), a set of 17 ambitious Global Goals adopted by member states for peace and prosperity for people and the planet by 2030.

Communities around the world are navigating a transformed landscape, with shifting needs and priorities. Microsoft partners are rising to the occasion, harnessing the power of new and emerging technologies to help reimagine a more resilient future.

Digital solutions can help public sector organizations reshape interactions with citizens through personalized, accessible services, harnessing technologies to build a more resilient future. In fact, by 2025, 95% of new IT investment made by government agencies will be made as a service solution.[1]

Through the Microsoft #BuildFor2030 Initiative, we're proud to support partners creating solutions to strengthen our institutions, enhance critical infrastructure, help reignite the economy, and create equitable access to health, education, and social services. Through public and private partnerships, they're creating innovative business models that enhance financial and digital inclusion around the world.
